July 2000/Issue #3

## On the Road Again....

Greetings to all from KX8W. I don't think I need to introduce myself as many of you have met me already, maybe not as KX8W but as one of my former call signs of N8UKS, KG8EU, AA8OM or K8HE. I have attended the eyeballs at Cheyenne, WY and Rutland, VT previously and will be at the Cedar Rapids, IA eyeball this year.

A little stroll down memory lane if I may. I have been active on the 3905 Century Club since 1991. I have enjoyed being part of such a nice organization and some of the nicest people I have ever met.

I would like to take a moment and little bit of space to tell you about the club call KC8NUS of which I am the trustee. KC8NUS is a club specifically designed for operation on the 3905 Century Club bands with some activity on other nets at times. The idea for a mobile club call was originated by KK5KK and myself while traveling together for a few days down the road together. We thought it would be neat to form this club and give the Century Club nets the opportunity to work another call from around the country and as of recently internationally.

I then asked KC5BFBK (Jerry) and K0MRC (Mike) if they would be interested in joining the club. I received an immediate yes to my request from both and thus the application went off to the FCC for the "Century Club Trucker's Club" call sign.

We asked KB5IPQ if he would be the club's QSL manager and received an answer of yes.

All the Century Club contacts QSL cards are mailed to me. At last count there were

over 800 cards confirmed. All these cards are individually numbered by KB5IPQ and when time permits I will be sending in for various awards for the club.

The club rotates the operation of the club call from one operator to the next on a set schedule of KX8W, KK5KK, KC5BFBK and then K0MRC. Each operator has the club call from Sunday to Saturday night.

There has been some question as to the legality and ethical operation of a mobile club call. All I can say is that my club is a legal operation as defined by the FCC. As far as ethics are concerned, ethics are like an opinion. We all have our opinions on what we think is the correct way to do some things.

I would like to ask the people that do work KC8NUS to please check first to see if you need the operator's QSL card before sending a card. If you already have KX8W/m OH for example then there is no benefit to you or me to send another QSL for KX8W/m OH. Just send your QSL card for the club only. This has been a major thorn in KB5IPQ's side as he is the manager for the all the operator's of KC8NUS with the exception of myself. I have been filling out my own cards since 01/01/00.

73 Harry Eldridge KX8W

**The FCC will find you**  
**Where ever you may be**  
Barry WV2X

Don't cause QRM, to the net or anyone else. If you are tired or bored don't want to wait for your turn, don't do it. Making funny noises, breathing in to your mike or digital re-runs is a bad thing to do. Turn your radio off or go get a cup of coffee and don't start. What our elder statesmen of the net say is true, "Don't acknowledge the QRM because it will fuel the fire." I know this firsthand. The FCC will get you. It happen to friends in my youth.

It was the summer of '63. It was hot and we were bored with baseball, so one of the guys said there was a radio club in town that meets on Friday nights. We all went and eventually got our Novice Licenses. But we had no money for radios. Our dream rig was a Heathkit DX-60...Collins...no way...That was not in the picture. One of the guys, Steve, got a used Viking rig and I noticed it had 11 meters on it. Wow, we could run 100 watts on the Citizens Band, I think I started it all. We would interfere with everyone on CB. We made noises, blew whistles, threw carriers...we did it all. And, the worst of it was that they responded back to us. They swore at us, they screamed at us and they promised bodily harm.

We did this day after day, all day long. And, when school started in September we - me, Steve, Fred, Dave and Dennis joined the High School Radio Club -WA2KMH. Dennis never got his license, but his brother has an Extra Class license.

Well, you know what? You wouldn't believe it. They had a tri-band beam and a Johnson rig - with 11 meters! Here we go again. We were QRMing everyone. We just couldn't stop. It was getting to be real sick. The CBers were furious and wanted to kill.

They said that they were going to find us, and lo and behold, one day they did. They were waiting for us in the parking lot at the High School. We scrambled quite quickly and never went back to the High School Radio Club.

But that's not all! About a month later someone asked me what happened to Dennis...he had just disappeared. Dennis's brother Fred called later and gave me the details. Dennis had purchased some used equipment, a Globe Chief transmitter, and set up a short wave broadcast station at his house running at about 2.5 Mhz. 50 watts of music and all.

We concluded that his signals got out because one day the FCC came a calling. They took every piece of equipment he had. Everything. They cleaned him out, and not only that...he receive a hefty fine from the FCC. We never saw Dennis again.

**Dateline FCC**

Hollingsworth said the FCC's High Frequency Direction Finding Center in Columbia, Maryland, has

been monitoring the 75-meter frequency on Saturday evenings for the past several weeks. "While we have not found that you are directly interfering or jamming other licensees that attempt to meet in 3.950 MHz, your slander and harassment of them violates §97.1 and §97.101 of the Commission's rules," Hollingsworth said. "It is not only a disingenuous attempt to thwart the group's meeting on 3.950 MHz, but it also degrades the service for legitimate users and endangers the frequency allocations for the Amateur Radio Service."

The FCC sent a *Warning Notice* April 27, 2000, to a General licensee advising him that Commission monitoring indicates that the licensee did not comply with station identification rules. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth advised the ham to familiarize himself with §97.119 of the FCC rules that require Amateur Radio stations to identify at least every 10 minutes during a communication and at the end of each communication. Hollingsworth requested that the ham call him within 10 days if he had any questions about the matter.

**BOARD OF DIRECTORS MEETING**  
MONTH of JUNE, 2000

Board Members Present  
WQ1H N2XTT AA3FC K4RWS N5UJB  
K6WPK WY8V WM9H K0LJ VE4ROY  
K9KGR (CHAIRMAN) WK5S (PRESIDENT)

KD7BVO was appointed as the 40 meter Late Net coordinator.

Started discussion of the Worked All Nets Award. With 2 new nets 20 and 80 RTTY it was questioned if the application for the Award should be changed. Discussion was postponed for the Award Committee to discuss it and bring recommendation back to the Board.

WK5S resigned from the position of the 40 meter early net coordinator. as of 09/01/2000. Gil K9KGR was appointed to take the position of the 40 meter early net coordinator.

July 30, 2000 will be a mobile and portable night.

The board is accepting proposals for Eyeball 2001 W7DO/KD7BVO has a proposal as well as WA2JIM.

AA3FC made a motion which would allow a Master Degree holder who has a club call to check in his club call at the same time as he checks in with his Masters. After a lively debate AA3FC withdrew his motion.

WY8V Secretary/ Treasurer Earl J Hubbard

**BOARD OF DIRECTORS MEETING**  
MONTH of JULY, 2000

A strong and vibrant discussion took place concerning an operator with a club checking in on a State line. The question was should the Station have 2 lines and the club have another 2 lines on the check in list. The current rules state that an "operator" may have only 2 lines on the check in list. a motion was made to reaffirm the current rules. It passed 8 to 2.

Then the Directors chatted about some net operations were some stations take several

minutes to make a call. In the case cited one station took 11 minutes to make a call. The board made the recommendation that Net Controls be diligent in keeping the net moving.

WY8V Secretary/ Treasurer Earl J Hubbard

**News of Interest**

As you know, those who participate in the 40 meter net, we share 7.100-7.300 with "Foreign" Broadcasting from Regions 1 and 3. Along with the normal QRN and certain QRM we anticipate the joy of 20...30 and sometimes 40 Over signals from our shared frequency friends through out the night. At WARC-79 the United States proposed a worldwide amateur allocation of 6.950-7.250. We also most lost our allocation of 7.100 to 7.300 which we gained at Geneva in 1959.

During the 1992 WARC conference the US again tried, however, the best that could be accomplished was a recommendation that the alignment of amateur allocations on 40 meter be placed on the agenda of a future conference.

The future came and now is gone. WARC-2000 passed a recommendation that the realignment of 40 meters be placed on the agenda of WARC-2003 with final approval made by the ITU council.

The objective of the International Amateur Radio Union is to return to the 40 meter allocation, 7.000-7.300, which was adopted at the first International Radiotelegraph Conference held in Washington, DC during 1927.

Thus we have 3 plus more years to share 40 meters.

The intensity of the Foreign Broadcast signals varies with your location in the States. A few years back I moved to Kansas from New Hampshire and was convinced that most of the Foreign Broadcast stations had shut down...that is until I moved back to New Hampshire.

Currently, the 40 meter net moves up in frequency after the check in list is completed and before the first Foreign Broadcast station starts it's operation. Look for the initial check ins on the net frequency of 7.2335, then if you show up later look for the net on or about 7.237.25.

## Steve on the Road

On the fifth day of our trip, Bill-KO6CS and I made our way to Dayton, OH. This was after running 10 State Lines on both 40m and 80m SSB nets. WOW, what a lot of fun and a lot of pretty country. We met a lot of nice people.

On Monday night we were mobile on the Florida and Alabama State Line just minutes from NT4Z's home.

We have a great time visiting Bill-K4SGF... Slimy Green Frog at his home in "L.J." Georgia That is the way it sounds not the way it is spelled. Thanks for the great dinner Bill. By the way folks we were only 5 minutes from Deliverance ( the Movie)... WOW.

Dayton was as always... Great. Love those swap tables. Mmmm! Always some great deals. Got to see the Yaesu FT1000MP Mark-IV in person. Got to have one of those.

We had some great conversations with CC members while at Dayton... see the photo of some of the gang.

Looking forward to next year

73 de WK5S Steve in Texas

## Help Wanted

Are there any stations interested in being net Control for the 40m Late Net? I need to schedule regular NCSs for Saturday or Sunday nights as well as every other Friday night.

Last night - Saturday night - on the Late Net we had 75 check-ins and it lasted about 4 hours. This the extreme - usually the list is from 35 to 50 check-ins and takes about 2.5 hours.

Many times this past month, I've come on frequency and been successful in getting volunteers to take a net where there hasn't been an NCS scheduled. This was successful until last night and I did the net myself. I don't want to have to do run the net myself. (I'm on the schedule myself for Sunday nights). I don't mind asking for volunteers at the start of net time because I think that gives various stations the opportunity be NCS if they've been thinking about it and just haven't come forward formally. The first time I was ever NCS, that's what happened - a call from the Net Coordinator for a volunteer to take the net.

So any volunteers for a regular time slot? Or just

someone out there that I can send a note to when I know one of the regulars can't make it?

For any of you who haven't gotten on the Late Net, you should try it. Either 40 or 75 meters - the 40 meter Late Net is at or around 7.238.5 every night at 0400Z; the 75 meter Late Net is at 3904 at 0500Z. Many stations start on the 40 meter Late Net; go to 75, then recheck back on 40 if we're still working there. No problem with that, either.

See you all on the Late Nets? Any takers on NCS? Any relays?...

Lynnette KD7BVO

## BOARD OF DIRECTORS MEETING MONTH OF MAY, 2000

### Board Member Present

WQ1H N2XTT AA3FC K4RWS NSUJB  
KC6LU(alt) W7LXR (alt) WY8V WM9H  
KBOOKS (alt) K9KGR (Chairman)  
WK5S (President)

The following corrections were made to the April Minutes:

Item5 A motion was made by K4RWS and seconded by K9KGR to start a 20 AND 80 meter RTTY nets. Motion passed with 11 yes votes and 0 no votes

The April minutes were approved after this correction

A motion was made by WK5S and seconded by WM9H on the following item:

The 3.905 Century Club, Inc. will make an Annual donations of \$100.00 to the QSL.NET, the service provider of the 3.905 Century Club Web site and any other service provider as specified by the 3.905 Century Club Web Master.

After a very spirited long debate the motion passed with 13 yes votes and 0 no votes.

The Club Treasurer was directed to write a check as specified in this motion.

A motion by N2XTT and seconded by WQ1H was made to close the Board Meeting.

A quick vote of 12 yes and 0 no votes officially closed the May 2000 3905 Century Club Board of Directors Meeting.

WY8V Secretary /Treasurer Earl J Hubbard

## Shortest Net On Record

Saturday July 15<sup>th</sup> I, WQ1H, was Net Control...I warmed my rig up, verified all was ready, paper work ready, preamble ready, listen around for pre net activity. Not one station was heard. Static, good ole QRN was 20 over plus. I started calling for stations at 23:50. Finally Bernie, KE1KT responded, then Keith, N1ZT responded...Wow I have 2 check ins. I continued to call...no one came back. Keith needed me and I needed him so we exchanged reports. Bernie mentioned that there was a major Solar Flare. So, I closed the Net at 00:15 UTC.

I Emailed Steve WK5S explaining what happened then I checked the Frequency one more time and heard Steve trying to start the net...when I say heard, I would have given him a 1x1...not quite a valid report. Steve was a little more successful with the Net than me.

I checked around to find out what was going on. First the A index was 218. Now, That will cause a little QRN. Then to the internet:

Solar activity rose substantially this week. Average sunspot numbers compared to the previous week rose nearly 68 points to 244.6, and average solar flux rose nearly 39 points to 207.5. A strong solar flare around 1037z on Wednesday sent a bubble of electrified gas, or plasma, toward the earth at more than 2 million miles per hour. Effects of the blast are being felt on Thursday, and a second more powerful wind is expected to arrive on Friday.

This could be bad news for the Pacific 160 Meter Contest this weekend, although possible aurora could prove interesting for the 6 Meter Sprint. There is a good chance that any geomagnetic upset may decline through the weekend though.

These flares originate in sunspot group 9077, which is large and magnetically complex. It harbors energy for powerful solar flares which could erupt on Thursday or Friday. For late updates, visit [www.spaceweather.com](http://www.spaceweather.com).

**Proton:** A positively charged elementary particle. A proton is 1836 times heavier than an electron.

**July 14, 2000** -- This morning NOAA satellites and the orbiting Solar and Heliospheric Observatory recorded one of the most powerful solar flares of the current solar cycle. Space weather forecasters had been predicting for days that an intense flare might erupt from the large sunspot group 9077, and today one did.

"Energetic protons from the flare arrived at Earth about 15 minutes after the eruption," says Gary Heckman, a space weather forecaster at the NOAA Space Environment Center. "This triggered a category S3 radiation storm."

The wave of solar particles - known as a solar proton event - is already four times more intense than any other event detected since the launches of SOHO in 1995 and ACE in 1997. At mid-afternoon (UT) on July 14th, the storm of particles from the Sun was still intensifying.

"The energetic particles from this flare arrived very quickly," continued Heckman. "Protons have been observed in the past to arrive between 15 minutes and several hours after a flare. This event was definitely one of the fastest, but we don't yet have all the numbers to say exactly how it ranks in this category."

If the shock wave is very strong, as this one might be, it can compress the magnetosphere and unleash a geomagnetic storm. In extreme cases, such storms can induce electric currents in the Earth that interfere with electric power transmission equipment. Satellite failures are possible, too. Geomagnetic storms can also trigger beautiful aurorae. These "Northern Lights" are usually seen at high latitudes, but they have been spotted farther south than Florida during intense disturbances.

Active region 9077 is very near the center of the Sun's visible disk. Solar rotation will carry the sunspot group toward the Sun's western limb by late next week. For the next few days, however, any additional eruptions are likely to be Earth-directed. **The fireworks may not be over yet!**

Check out [www.spaceweather.com](http://www.spaceweather.com) ...there some exciting visuals of this event.

## **Eyeball 1999** **Rhode Island**

The 1999 Eyeball was held at Glen Park in Portsmouth, RI, a small community along the Sakonett River just north of Newport. The Eyeball was hosted by Jeff, WA1VQY. Al, KB1BMK was also instrumental in securing the site for us. Roughly 120 people attended the Eyeball from all over the country. The furthest traveled guest was Jim, KL7IYD, with other very notable travelers from the west coast such as Mary, W7HPA, Ray, AC6LU, and his wife Barbara, Bill, KO6CS and Hugh, N7OKM.

The fun in RI began on Wednesday when Steve, WK5S (formerly N5SV), and Ray arrived and set up for mobile operations on the MA/RI line. The following night they set up for portable operations there and were joined by Bill and Mary. Thursday was quite an adventure setting up antennas and stations. A trip to the local Home Depot and some careful selection of the proper trees and we were off. The 40 meter station included Steve's set up including his Collins amp. (No he wouldn't donate it as a door prize.)

The 40 meter antenna was a wire beam that did so well in OK, and a beverage pointing west. This antenna worked great, we were able to hear WW6F/Mobile KL7 with very little difficulty. From RI that is a momentous task!!

The 75 meter station consisted of a rig loaned by Allen, W1PX, and a 300 foot zep, the local clubs field day ant. Without the help of Steve, Ray, Al, KB1BMK, and John WA1ABI (not a club member), I would never have been able to get things ready in time for air time.

The meal was a good old fashioned Clam Bake. I think most of the people enjoyed watching the Bake master preparing the meal as much as they did eating it. For those of you who have never had a clam bake and find yourself out this way, it is highly recommended.

Peter, N2XTT was also a tremendous help with door prizes and making Eyeball memorabilia. I can't tell you how much I appreciated what he did. Peter made up laminated flags with the CC logo and the persons call and state flag on it. He also made up iron on logos for everyone for the Eyeball, not to mention the Eyeball QSL cards. Surely Peter was instrumental in making the Eyeball a success.

Many new friendships were formed at the Eyeball, as many more will be in the future I am sure. What makes it really stick out in my mind is how nice and friendly all the attendees were. It

was nice to see entire families enjoying the site. I would encourage future attendees to bring their families along. Along those lines, a notable event occurred when the YL's and XYL's of several members went on a shopping trip for bingo prizes. The driver friendly signs of RI sent them to nearly the opposite side of the state! Not to fear though, they were back in plenty of time for the usual bingo battle that has become so popular at the Eyeball.

Lastly, I would be remiss if I did not thank ALL who attended. With out you we would not have the fond memories of the RI Eyeball. Many people helped out that I never even was aware of, and any omission to that end is not at all intentional. In particular I feel I must mention My wife Kelley, son Bradford, daughter Brittany, mother-in-law, brothers-in-law, and sister-in-law, without whose help I NEVER would have been able to pull it all together. Hoping you enjoy many more Eyeballs to come...

de Jeff WA1VQY

### **40 meter RTTY**

Effective next Sunday, July 23, the 40m RTTY Net will start one hour later, at 10:00pm Eastern Daylight Time -- or 02:00UTC Monday rather than 01:00UTC. This change will remain in effect for the remainder of Daylight Savings Time.

So in effect, the 40m RTTY Net will now start at 02:00UTC, all year around rather than always starting at 9:00pm Eastern time like we used to do.

This change is by popular demand and should help overcome propagation problems we've been having lately as well as scheduling problems with other nets (maybe...)

I hope this change will allow many more of you to check into the 40m RTTY Net!

-Marty NW0L 40m RTTY Net Coordinator
